

KISHORE P

Full-Stack Engineer · AI/ML + UI/UX · Designer Who Codes

kishkeerthi24@gmail.com | +91 73489 28249 | [linkedin.com/in/kishore-p24](https://www.linkedin.com/in/kishore-p24) | github.com/Kishore2005-kish | [Portfolio](#)

PROFILE SUMMARY

Final-year Computer Science student combining full-stack engineering with intentional UI/UX design thinking. Currently building SpaceGuard AI an ML-driven satellite anomaly detection system using Random Forest, XGBoost, and LSTM on NOAA/ESA datasets. Proven track record across 10+ hackathons and award-winning civic-tech products. Comfortable designing systems that work beautifully and perform reliably.

SKILLS

ML/AI: Python, TensorFlow, PyTorch, Random Forest, XGBoost, LSTM, scikit-learn, spaCy, KeyBERT

Frontend & Design: HTML5, CSS3, JavaScript, React, Chart.js, Figma, Canva, Data Visualization, Component Systems

Backend & Databases: FastAPI, PHP, MySQL, PostgreSQL, REST APIs, Adzuna API, NOAA Data Integration

Tools & Platforms: Git, GitHub, Vercel, XAMPP, VS Code, Figma, Jupyter Notebooks

CURRENT MAJOR PROJECT

SpaceGuard AI — Satellite Space Weather Impact Prediction

2026 (In Progress)

Python · TensorFlow · PyTorch · FastAPI · React · PostgreSQL | Final Year Capstone | [SpaceGuard-Ai Github](#)

Building an ML-driven anomaly detection system predicting space weather impacts on satellite operations using NOAA (Kp Index, Solar Flux, Sunspot Number, Solar Wind Speed, Proton/Electron Flux) and ESA historical datasets.

- Implementing ensemble ML models — Random Forest, XGBoost, and LSTM neural networks — for multi-temporal risk scoring and anomaly flagging.
- Designing a React-based operator dashboard surfacing real-time risk scores, historical trends, and predictive alerts with clear visual feedback hierarchies.
- Architecting a FastAPI backend with PostgreSQL for model inference pipelines and time-series data management.
- Exploring optional Ethereum/Hyperledger blockchain integration for immutable data integrity and audit trails.

PAST PROJECTS & HACKATHONS

Job Market Trend Analyzer

2026 | 24-hr Hackathon

Python · FastAPI · HTML/CSS · JavaScript · Chart.js · spaCy · KeyBERT · Adzuna API | [Job-trend Analyzer Github](#)

- Designed a consistent, multi-page dashboard UI with a unified colour palette, standardised button components, and clear information hierarchy.
- Implemented skeleton loading states during live API calls to improve perceived performance and reduce cognitive load.
- Built interactive data visualisations — bar charts and trend lines via Chart.js surfacing job market demand patterns from real-time Adzuna API data.
- Integrated an NLP pipeline (spaCy + KeyBERT) to extract skill keywords from uploaded resumes and match them against live job postings for gap analysis.

Audio Deepfake Detection Web App

2026 | 24-hr Hackathon

Python · Web Application · Audio Processing · Real-time Waveform Visualisation | [DeepFake-GitHub](#)

- Designed a high-contrast dark-blue UI to communicate technical authority and security credibility for a fraud-detection product.
- Built an interactive audio upload interface with real-time waveform rendering that highlights deepfake-detected segments in red delivering immediate, scannable visual feedback.
- Implemented both file-based and live audio detection modes, enabling the system to function as a real-time monitoring tool.

SmartRecycle — Civic-Tech Incentive Platform

2025 | 2× Award Winner

HTML · CSS · PHP · MySQL | [SmartRecycle-GitHub](#)

5th Semester Mini Project

- Designed a nature-inspired visual identity (green/white palette, rounded UI elements) to reinforce the platform's sustainability mission.
- Designed and built a dual-interface system user-facing dashboard for waste logging and reward redemption, alongside an admin panel for inventory management.
- Engineered a gamification layer that awards points per kilogram of recyclable material submitted, driving user retention through tangible rewards.
- Won 1st Place (₹25,000) at Sustainathon, VVCE Mysore (50 finalist teams from 100+ applicants) and 1st Prize at an Inter-College Project Expo.

Eco-earn- The Upgraded Version of SmartRecycle

React · Tailwind CSS · Firebase · MySQL · | [Eco-earn-GitHub](#)

- Developed an AI-powered recycling rewards platform that incentivizes sustainable waste disposal through points, badges, and redeemable rewards.
- Integrated Gemini Flash Vision for automated image-based waste classification, reducing dependence on manual verification.
- Implemented Firebase Authentication and Firestore for secure user management, real-time data synchronization, and scalable storage.

- Built role-based user and admin dashboards for waste tracking, reward redemption, inventory management, and operational monitoring.
- Created interactive global, national, and state-level sustainability analytics using real-world environmental datasets and dynamic visualizations.
- Designed a customizable user experience with achievement badges, personalized progress tracking, and light/dark mode support.

Organ Donation System

2025 | Hackathon Build

HTML · CSS · JavaScript · PHP · MySQL | *First Full-Stack Project* | [Organ Donation-GitHub](#)

- Designed and built a DBMS-focused donation matching platform with user registration, donor-recipient matching, and status tracking.
- Kept UI close to wireframe designs with intentional colour choices and background imagery to maintain clarity and usability.
- Completed end-to-end in 12–13 hours during hackathon sprint; learned critical lessons around data privacy and information architecture design.

Secure Online Voting System

2025 | 4th Semester Mini Project

HTML · CSS · PHP · MySQL (XAMPP) | [Online Voting-GitHub](#)

- Designed and implemented a role-based authentication system with distinct voter and admin interfaces first end-to-end full-stack project.
- Built candidate management, vote casting, and results dashboard flows with a structured MySQL backend enforcing one-vote-per-user constraints.

ACHIEVEMENTS

- 1st Place — Sustainathon, Vidyavardaka College of Engineering, Mysore | ₹25,000 prize | 50 finalist teams from 100+ applicants (SmartRecycle)
- 1st Prize — Inter-College Project Expo | SmartRecycle Platform
- 10+ Hackathons across sustainability, healthcare, civic-tech, and AI/ML domains — consistently served as team lead responsible for product direction, architecture, and demo strategy

LEADERSHIP & COMMUNITY

Content & Photography Coordinator

2025

College-Level Hackathon, Maharaja Institute of Technology, Thandavapura

- Led visual content strategy and photography coverage for a college-organised hackathon, managing end-to-end documentation and event branding.

Hackathon Team Lead

Multiple Inter-College Hackathons

- Served as team lead across 10+ hackathon events, owning product ideation, technical architecture, UI/UX direction, task delegation, and final demo presentations.

EDUCATION

B.E. in Computer Science & Engineering

Expected Oct 2027

Maharaja Institute of Technology, Thandavapura, Karnataka | CGPA: 7.0 / 10.0

- Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Software Engineering, Web Technologies, React
